

## **METHOD AND DEVICE FOR DELIVERING FLUID, AND A HEAT TRANSFER CARTRIDGE**

### **Abstract**

A method and device for delivering a fluid, in which the fluid is fed from a fluid source of a fluid-delivery device and delivered through a discharge orifice assigned to the delivery device. Before the fluid is delivered through the discharge orifice, it is heated or cooled by flowing through a heat-transfer chamber, which contains a fluid-permeable structure having a large number of communicating cavities through which the fluid flows.
